	b. Rumor	
	c. Misinformation	*
	d. Crowd Panic	
2. Which of the following is explicitly given as an example of Disinformation (intentionally false information) in the presentation?	a. Sharing an outdated emergency warning thinking it is still current.	
	b. A fake alert sent to cause panic at a crowded event.	*
	c. An unverified message about an aftershock circulating rapidly on social media.	
	d. Information spread by an official source that is later found to be slightly inaccurate.	
3. What is the process of verifying whether information is true by comparing it to reliable and official sources, a key skill in stopping misinformation?	a. Digital Resilience	
	b. Fact-checking	*
	c. Taking a Proactive Approach	
	d. Crowd Panic	
4. Which myth related to Floods is debunked in the presentation?	a. Only verified alerts from civil protection authorities should be trusted.	
	b. False evacuation notices cause panic.	
	c. "If there's no rain right now, there's no flood risk."	*
	d. Misleading claims about bridge collapses often go viral.	
5. Which dangerous health myth related to Radiological Accidents / Nuclear	a. Any radiation exposure is fatal.	
	b. Health impact varies greatly with proper sheltering.	

<p>Facility Leaks is specifically debunked in the training module?</p>	c. "Drinking iodine or alcohol removes radiation."	*
	d. Preparedness requires pre-bunking myths.	
<p>6. According to the presentation, what is the main risk created by unverified rumors (e.g., "X mall is falling apart!") during the chaos of an earthquake?</p>	a. It overloads communication systems.	
	b. It can trigger stampedes or mislead rescuers.	*
	c. It proves that official guidance is delayed.	
	d. It only affects vulnerable populations.	
<p>7. In the context of Heatwaves, what common safety myth is debunked by the fact that fans alone do not reduce body temperature?</p>	a. "You don't need sunscreen unless you're at the beach."	
	b. "Drinking alcohol cools you down."	
	c. "Fans alone are enough to stay safe in extreme heat."	*
	d. Vulnerable populations are at greater risk.	
<p>8. In a Chemical Spill/Toxic Release scenario at a public venue, what is the safest course of action emphasized by the training module?</p>	a. Immediately running to the nearest exit regardless of instructions.	
	b. Following only official instructions from event security or emergency services.	*
	c. Sharing every piece of information heard online to warn others.	
	d. Moving towards the crowd to see what is happening.	
<p>9. Which myth related to Vector-Borne Diseases (like Dengue or Zika) is specifically addressed in the presentation?</p>	a. Eating garlic or taking vitamins can prevent mosquito bites.	
	b. Only repellents are proven preventive methods.	
	c. "Only dirty areas or poor communities are affected by mosquito-borne diseases."	*
	d. Community panic may cause stigmatization of infected individuals.	

10. When sudden chaos or a rumor (like a "toxic gas leak") erupts in a crowded public venue, what is the most important first response according to the guidance?	a. Immediately follow the panic and rush to the exits to escape quickly.	
	b. Pause, observe the situation, remain calm, and seek verified information from authorized personnel.	*
	c. Record and share a video of the scene on social media to document the event.	
	d. Assume the rumor is true and find a place to hide.
